WIRELESS DISPLAY RECEIVER

Display your smartphone and tablet multimedia content directly on your TV with the best HD quality.

Once connected to your TV through HDMI this wireless receiver can communicate with your device based on Android as well as IOS for iPhone e iPad, laptop Windows e Mac. Any kind of video, game, pictures, presentation or document could be mirrored to your tv without any kind of cable and simply in wireless mode.

Receiver supports Wifi EZ Cast, DLNA, Miracast and EZAir (Airplay) so it is universal solution compatible with all standards available in the market. User interface is really friendly and easy to use, allows you to choose also what you want to display on TV, for example only video and pictures or desktop of your mobile solution to check your most used applications for communications and gaming.

Another advantage is that once your TV is connected to your mobile or tablet, internet connection of your mobile device is still active and you will be able to carry on surfing on the web with no decrease of quality and speed.

This receiver can also be used for video conference and presentation once is connected to a video projector and it is powered by USB cable plugged directly to your TV or to any USB power supply.
